

Chesapeake Impact Equity

A Regional Sustainability Strategy

Investment Objective

The MCM Chesapeake Impact Equity Strategy seeks to provide capital appreciation by investing in a concentrated portfolio of high quality, mid to large-cap companies that have a positive impact on the sustainability of the Chesapeake Bay Region.

Investment Strategy

- **Positive Regional Impact:** Portfolio holdings have a definable positive impact on the Chesapeake Bay Region as seen through various efforts including carbon reduction, water use reduction, energy efficiency, and environmental certification.
- **Concentrated ESG Approach:** Our strategy typically consists of 15-20 positions that represent the most attractive mid to large-cap companies that meet our investment criteria.
- **Experienced Investment Team:** Team approach with 100+ years of combined investment experience at MCM.

Firm Information: Maryland Capital Management (MCM) is an investment advisor registered with the Securities and Exchange Commission under the Investment Advisors Act of 1940. Registration of an investment advisor does not imply any level of skill or training. MCM manages a variety of equity, fixed income, alternative and balanced investment strategies for both high net worth and institutional investors. The standard management fee is calculated at an annual rate of 1% of assets under management (AUM), but is subject to negotiation in certain instances.

Composite Characteristics: The Chesapeake Impact Equity composite was created in December 2016. Accounts included are comprised of all actively managed fee paying and non-fee paying equity accounts that are managed with an investment objective of Growth for benchmarking purposes. The percentage of the composite represented by non fee paying portfolios at the end of each annual period is as follows: 2017 - 100%, 2018 - 100%, 2019 - 99%. The composite performance results are compared to the S&P 500 Index and the MSCI USA ESG Select Index¹. The S&P 500 Index is presented gross of withholding taxes. The strategy seeks capital appreciation by investing in a concentrated portfolio of high quality, large capitalization companies that have a positive impact on the sustainability of the Chesapeake watershed. Portfolios generally hold twenty positions representing MCM's best ideas in the ESG space, with a majority of the holdings having a definable impact on the region. A complete list and description of all firm composites is available upon request.

Calculation Methodology: Valuations and returns are computed and stated in U.S. dollars, and individual portfolios are revalued monthly and at large cash flows. The Modified Dietz method (average capital base equation) is used to calculate monthly returns for separate accounts. Results for the full historical period are time-weighted. MCM calculates an asset-weighted return using the aggregate method. This method aggregates market values and cash flows for all accounts and treats the composite as if it were one account. The results portrayed reflect the reinvestment of dividends, capital gains and other earnings when appropriate. Gross of fees returns are calculated gross of management fees, custodial fees, and withholding taxes on foreign dividends and net of transaction costs. Net of fees returns are calculated using actual client fees, pro-rated on a quarterly basis. Dispersion is calculated as the asset-weighted standard deviation of all accounts included in the composite for the entire year around the annual composite return. If the composite contains five or fewer portfolios for the full year, a measure of internal dispersion is not required. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Other Disclosures: MCM claims compliance with the Global Investment Performance Standards (GIPS[®]) and has prepared and presented this report in compliance with the GIPS standards. MCM has been independently verified for the periods 12/31/95-12/31/19. The verification report(s) is/are available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. Past performance does not guarantee future results. This performance report should not be construed as a recommendation to purchase or sell any particular securities held in composite accounts. Market conditions can vary widely over time and can result in a loss of portfolio value.

¹The MSCI USA ESG Select Index is designed to target companies with positive environmental, social and governance (ESG) factors while exhibiting risk and return characteristics similar to those of the MSCI USA Index. The index is constructed through an optimization process that aims to maximize its exposure to ESG factors, subject to an expected tracking error of 1.8% and other constraints. It is sector-controlled, and is designed to over-weight companies with high ESG ratings and under-weight companies with low ratings. Tobacco and Controversial Weapons companies, as well as major producers of Alcohol, Gambling, Firearms, Military Weapons and Nuclear Power, are not eligible for inclusion. The S&P 500 Index is widely regarded as the best single gauge of the large cap U.S. equities market. It includes 500 leading companies in leading industries of the U.S. Economy, capturing 75% coverage of U.S. Equities. Both indexes are unmanaged and cannot be invested in directly.

² Composite dispersion and standard deviation calculated on an annual basis. Three-Year Ex-Post Standard Deviation is not shown because 36 months of returns are not yet available.

* Total Entity Assets include both Assets Under Management and Assets under Advisement
