Flexible Income Strategy

Investment Objective

The MCM Flexible Income Strategy seeks to provide a high level of income by investing in a diversified portfolio of equity and fixed income securities. Due to the emphasis on income, accounts in the composite will also own REITs and Preferred Stocks, which provide exposure to other income producing areas of the market.

Investment Strategy

- **Diversified Approach:** Our portfolio is constructed of several income-producing asset classes. This diversification has the effect of reducing volatility and enhancing returns.
- **Balanced:** Our focus on independent research and analysis leads to a portfolio of complementary individual securities, balanced between equity and Fixed Income.
- **Yield:** We target an annual income yield of approximately 4%, independent of the interest rate environment.

Top 10 Equity Holdings	Ticker	Asset Allocation	% of Portfolio

Firm Information: Maryland Capital Management (MCM) is an investment advisor registered with the Securities and Exchange Commission under the Investment Advisors Act of 1940. Registration of an investment advisor does not imply any level of skill or training. MCM manages a variety of equity, fixed income, alternative and balanced investment strategies for both high net worth and institutional investors. The standard management fee is calculated at an annual rate of 1% of assets under management (AUM), but is subject to negotiation in certain instances.

Composite Characteristics: The Flexible Income composite was inceptioned in February 2009 and created in December 2012. Accounts included are comprised of all actively managed balanced accounts with assets greater than \$250,000 that have an asset allocation target range of 80/20 to 50/50 equities to bonds, with no more than 5% tax-exempt bonds. These accounts primarily invest in large capitalization US equities and taxable investment grade fixed-income securities with maturities less than 10 years. Due to an emphasis on income, accounts in the composite may also own MLPs, REITs, Preferred Stocks, and ETFs with an emphasis on income producing areas of the market. The percentage of the composite represented by non fee paying portfolios at the end of each annual period is as follows: 2018 - 2%, 2019 - 0.4%, 2020 - 0.4%. Effective 06/30/2018, the benchmark was changed from a blend of the Barclays Intermediate Government/Credit Index and the S&P 500 Index¹ to a blend of 50% S&P 500 Value Index and 50% Barclays Intermediate Government/Credit Index to better represent the strategy's investible equity universe. Effective 01/01/20, the benchmark was retroactively changed from a blend of 50% S&P 500 Value Index and 50% Barclays Intermediate Government/Credit Index¹ to a blend of 50% Morningstar Dividend Yield Focus and 50% Barclays Intermediate Government/Credit Index to better represent the strategy's investible equity universe. Some accounts hold a cash balance that may impact performance. A complete list and description of all firm composites is available upon request.

Calculation Methodology: Valuations and returns are computed and stated in U.S. dollars, and individual portfolios are revalued monthly and at large cash flows. The Modified Dietz method (average capital base equation) is used to calculate monthly returns for separate accounts. Results for the full historical period are time-weighted. MCM calculates an asset-weighted return using the aggregate method. This method aggregates market values and cash flows for all accounts and treats the composite as if it were one account. The results portrayed reflect the reinvestment of dividends, capital gains and other earnings when appropriate. Gross of fees returns are calculated gross of management fees, custodial fees, and withholding taxes on foreign dividends and net of transaction costs. Net of fees returns are calculated using actual client fees, pro-rated on a quarterly basis. Dispersion is calculated as the equal-weighted standard deviation of the gross returns of all accounts included in the composite for the entire year around the annual composite return. The three-year annualized standard deviation is calculated by Orion and measures the variability of the gross composite returns and the benchmark returns over the preceding 36-month period using returns gross of fees. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

Other Disclosures: MCM claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. MCM has been independently verified for the periods 12/31/95 – 12/31/20. The verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report. In March 2015, we discovered an error, which led to a reduction in composite assets during 2013 by 10.11%. Prior to 12/31/19 Flexible Income was known as Strategic Income; the name was revised to better describe the investment strategy. This change was made only in name, not in strategy. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

¹The Barclays Intermediate Government/Credit Index is an unmanaged, market-weighted index generally representative of intermediate-term government and investment grade corporate debt securities. Morningstar tracks high-yielding, dividend-paying, U.S.-backed securities screened for superior company quality and financial health. Both indexes are unmanaged and cannot be invested in directly.

*Inception date of the Flexible Income Composite is January 31, 2009

** Total Entity Assets include both Assets Under Management and Assets under Advisement.
